BRIDGE MEDICAL INTRODUCES NEW PIVOT GRIP™ AND TELESCOPING PORTABLE GRAB BARS

Two unique designs offer seemingly limitless applications and independence for consumers

(*St. Paul, Minn.*) **Bridge Medical**, the industry leader in Portable Grab Bar technology and innovation, has introduced two new products – the **Telescoping Grip** and **Telescoping Pivot Grip™** – offering consumers two safe and portable alternatives when costly permanent grab bar installation is not possible, or is unnecessary due to a temporary need.

Both products come in two sizes, each with the ability to adjust to varying lengths, accommodating the specific needs of the user in any size application area. Two commercial grade, 4.7-inch diameter grips apply to smooth, flat, non-porous surfaces to provide the strongest and most reliable hold on the market today.

Telescoping Grip

- Two adjustable sizes: Medium (19"-24") and Large (24"-29")
- Adjustable length offers adaptability to most any tub/shower tile configuration

Telescoping Pivot Grip™

- Two adjustable sizes: Medium (22"-27") and Large (27"-32")
- Pivoting ends allow for endless installation options; the gold standard in flexibility
- Adjusts to stretch across a corner, inside of a bathtub or across unparallel surfaces

This innovative suction technology, manufactured with non-corrosive metal components, won't damage surfaces and requires no tools or professional installation for use, saving consumers hundreds of dollars over the installation costs of a permanent grab bar.

Bridge Medical Grab Bars products are sold exclusively through Home Medical Equipment Dealers, pharmacies and select retailers. Product photos and more information are available online at www.bridge-medical.com/media.php.
